1 Reference is made to the following documents:

D2: US 6 164 603 A (KAWAI ET AL.) 26 December 2000

D3: US 3 090 826 A (COCHRAN CLARENCE W) 21 May
1963 (1963-05-21)

2 Document D1 is considered to be the closest prior art. It discloses (the references between parentheses relate to said document, see figures 1, 2 and 11 in particular):

a) apparatus for holding elongate articles, in particular electrical lines and/or fluid lines, having a holding part () which has a base wall (22) and two mutually opposite edge walls (24, 24'), and having a cover part (40) which is attached to the holding part () in a pivotable manner by means of an edge hinge (28) and can be connected to the holding part () by means of a closure arrangement (30) which is situated opposite the edge hinge (28), with the cover part (40) having at least two covering portions (40A, 40B),

from which the subject matter of independent claim 1

WRITTEN OPINION OF THE
INTERNATIONAL SEARCHING AUTHORITY

International application No.

PCT/EP2005/001910

Box No. V

Reasoned statement under Rule 43bis.1(a)(i) with regard to novelty, inventive step or industrial applicability;
citations and explanations supporting such statement

differs in that:

the cover part has at least three covering portions, with a centre hinge being formed between adjacent covering portions in each case, and with the closure arrangement providing a number of closing positions which corresponds to the number of centre hinges, in which closing positions the covering portions are arranged at different distances from the base wall.

The subject matter of claim 1 is therefore novel (PCT Article 33(2)).

b) The problem addressed by the present invention can therefore be considered that of specifying an apparatus for holding elongate articles which is distinguished by a certain degree of variability as regards installation options.

c) The solution to this problem which is proposed in claim 1 of the present application involves an inventive step (PCT Article 33(3)) for the following reasons:

The combination of features contained in claim 1 is neither known from the available prior art nor suggested by it.

3 Claims 2-5 are dependent on claim 1 and therefore likewise meet the PCT requirements for novelty and inventive step.

4 INDUSTRIAL APPLICABILITY

The subject matter of claims 1 to 5 can be produced and used and is therefore industrially applicable.
